

Medical center uses Axis PTZ network cameras for remote teaching.

Organization:
Mackay Memorial
Hospital

Location:
Danshui, Taiwan

Industry segment:
Healthcare

Application:
Remote teaching and
training

Axis partner:
CLEAN PO International

Mission

The Mackay Memorial Hospital in Taiwan features a clinical skills center which provides comprehensive education and examination. The hospital was looking for a solution that could strengthen its healthcare services and enhance the effectiveness and quality of clinical training.

Solution and result

The hospital opted for an IP-based video solution. AXIS 214 PTZ Network Cameras were integrated into the simulation system used for clinical teaching, ensuring improved remote learning possibilities and greater involvement from remote students. The cameras' 18x optical zoom, auto-focus, as well as high quality color video make subtle reactions clearly visible, enabling a highly realistic experience in patients' possible clinical reactions. Learning effectiveness has been enhanced thanks to bi-directional communications, which allows students to raise questions and immediately discuss with the instructor.
